

Experiment - 12

a) Aim: Implement the client, Server using TCP/UDP Sockets.

Client:

```
import socket
import time
def Ping_Server (host = "127.0.0.1", Port = 12345):
    with socket.socket(socket.AF_INET, socket.SOCK_STREAM) as s:
        s.connect((host, Port))
        s.send(b'Hello')
```

try:

```
s.sendto(b'Hello', (host, Port))
```

```
except socket.timeout:
```

```
    print("Request timed out")
```

Ping_Server()

Result:

The message hello is successfully sent to the Server.

27/10

b) Aim :
Implement chat client Server
using TCP / UDP Sockets

Algorithm :

```
import Socket
```

```
def Start - Server (host = "127.0.0.1",  
                    Port = 12345).
```

```
with Socket.Socket (Socket.AF_
```

```
INET, Socket.SOCK_DGRAM  
as s.
```

```
s.bind ((host, Port))
```

```
Print (f "UDP Server running on  
{host} {Port}")
```

```
while True :
```

```
data, addr = s.recvfrom  
(1024)
```

```
Print ("Received message  
from {addr} : {data}  
decode ('utf-8')")
```

```
Start - Server ()
```

Output :

UDP Server running on 127.0.0.1 : 12345.
Received Message from ('127.0.0.1', 52365)
Hello.
